This article has been corrected: The authors requested the replacement of panel B in Figure 4. The mistake is in posting of the same GAPDH bands in both Figure 4A and Figure 4B due to carelessness. This correction does not change the content of the publication and do not affect the conclusion of this research. The corrected Figure 4 is provided below.
Figure 4. Lycorine enhances the anti-cancer effects of vemurafenib. (B) Mitogen-activated protein kinase kinase 2 (MEK2) was depleted in MEK2-overexpressing HCT116 cells by exposure to lycorine, and western blotting was used to investigate the levels of autophagy and apoptosis. GAPDH was used as a loading control.
